WHERE IS PRODUCTION TIME BEING LOST?

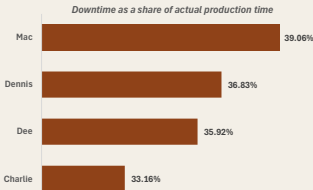

KEY INSIGHT:

80.4% of downtime comes from five factors

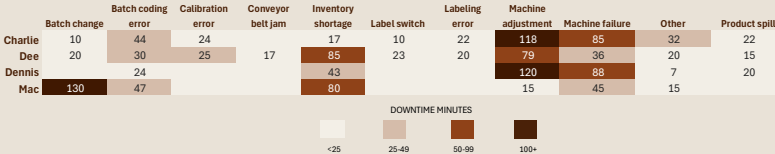

Primary driver

Machine adjustment accounts for 332 minutes, followed by machine failure and inventory shortage.

WHO IS MOST AFFECTED BY DOWNTIME?

WHAT IS DRIVING DOWNTIME FOR EACH OPERATOR?

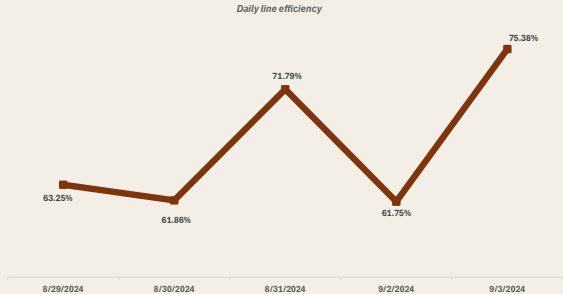

OPERATIONAL TAKEAWAY:

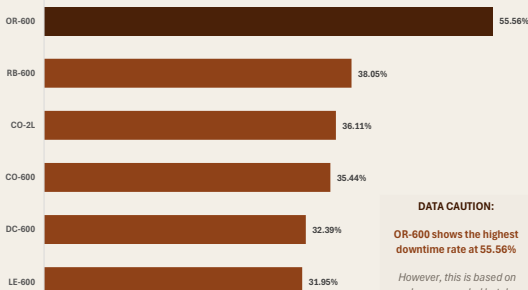

Different operators show distinct downtime patterns.

Interventions may need to be targeted rather than applying a single solution across the line.

LINE EFFICIENCY ACROSS THE PRODUCTION PERIOD

WHICH PRODUCTS HAVE THE HIGHEST DOWNTIME RATE?

DATA CAUTION:

OR-600 shows the highest downtime rate at 55.56%

However, this is based on only one recorded batch.
